**DETAILED ACTION**

1. Applicant's election with traverse of Group I, claims 1-14 in the reply filed on 14 June 2007 is acknowledged. The traversal is on the ground(s) that there is a common special technical feature. This is not found persuasive because the feature argued by applicant is old as noted in section 2 of the detailed portion of the office action mailed 5/16/2007 and therefore cannot be a special technical feature.

The requirement is still deemed proper and is therefore made FINAL.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ogawa et al. (U.S. 5,516,574).

Art Unit: 1772

Ogawa et al. teaches roughening a polyester bi-layer film by the use of both organic polymer particle and inorganic particles (abstract). The instant invention claims a polyester film with a Ra of above .2 microns. It would have been obvious to one of ordinary skill in the art to have adjusted the surface roughness within the instant claimed range in order to have achieved a desired surface friction for a given tape application of Ogawa because of the teachings of Ogawa et al.
